

Curious about quantum computing?
Ready to connect with industry leaders?
Want real-world quantum experience?

Join BYU's Intermountain Quantum Competition!

November 6-7, 2026

IQC is a two-day competition and networking event focused on quantum hardware, computation, and application. As a student-hosted event at Brigham Young University, it is one of few collegiate hackathons focused on quantum technology.

We've worked hard to secure major problem sponsors from the industry and we are now accepting student applications! No experience is required, and we mean it. Last year, our directors competed in their first quantum hackathon at MIT with no previous experience... and won! That could be you at IQC.

Alongside their problems, companies are sending mentors to help students learn how to use quantum platforms and attack the problem, so you won't be in it alone. You and your team will learn how companies today are utilizing quantum and its approaches from keynote speakers. You'll apply methods with the help of mentors, and you'll learn how your industry problem maps to a quantum solution.

Winning competitions is great, but the real value of IQC is connection. Over 48 hours, you'll meet other like-minded students, quantum professors, and company recruiters. These people might be your next co-founder, graduate advisor, or boss.

Whether you're flying solo or already have a team, we're excited to see your application. Join us in November for an unforgettable experience!

*If funding is the reason your company can't attend, we'd still like to work with you. We'll figure out a cost and support level that fits your organization.
